Care Method 1

Care Method 2

Wiping with a soft, damp sponge or cloth, of non-abrasive material, with lukewarm water is recommended for all Honeycomb Shade surfaces which need spot cleaning.

Care Method 3

Vacuuming with a soft bristle vacuum cleaner brush attachment is recommended for all Honeycomb Shade surfaces which are heavily soiled.

LIGHT CONTROL DEFINITIONS

A	Sheer - Filtered light for an open, softened view, UV protection and glare reduction, when privacy is not a concern.
B	Semi-Sheer - Softly diffuses light while offering minimal privacy. Images, shapes and people can be seen with some clarity.
C	Light Filtering - Diffuses sunlight and helps to reduce glare. Provides a moderate degree of privacy as only shadows will be discernible.
D	Room Darkening / Blackout - Room Darkening dramatically reduces light. Provides privacy against most direct light. Images, shapes and people are not discernible. Blackout fabrics provide the ultimate in light control and privacy; perfect for bedrooms, nurseries, or media rooms. Pair with side channels or privacy light block for additional light control.

CONTINUOUS CORD LOOP SYSTEM

Continuous cord loop easily lifts any shade – even large or hard-to-reach – and stops the shade exactly where you want. No more tangled cords!

- All continuous cord loop shades can be ordered with the fabric covered headrail and bottomrail for a surcharge, or with the color coordinated non-wrapped rails at **no additional charge. Must be specified** when order is placed.
- On top-down/bottom-up Honeycomb shades, a fabric insert is standard (does not apply to Hybrid Pleat). This is an extra two-cell fabric gasket attached to the top headrail and acts as a seal to eliminate light leakage between the headrail and center rail when the shade is closed.

For orders placed after 5/14/24, the tensioner has been pre-selected in one of five colors, White, Vanilla, Light Brown, Dark Brown & Black. The tensioner color may be overridden during order entry.

VERTICAL APPLICATION ORDERING NOTES

- Specify inside (IB), outside (OB), inside non flush mount or flush mount.
- Specify stacking configuration – left stack, right stack, split stack, or center stack. On split stack shades, both panels will be of equal width, unless otherwise specified. Center stacks are a surcharge option.
- Inside non flush mount valance returns are 1-1/2" if returns are selected*
- Standard handle height is 40" to 50" from bottom of moving rail; specify any desired variation from this standard.
*Override height location will be the center of the handle.

- Standard installation hardware (brackets) provided.
- 2" Hybrid Pleat handles will be clear.
- Also refer to vertical application measuring in "General Information" section.

NOTE: Cut-outs can be done on movable and stationary rail. 1" is the only cut-out width available for Vertical Application shades. 6" is the maximum cut-out height and the height is measured from the floor to the top of the desired cut-out location.

Cut-outs are not available on 2" Hybrid Pleat.

For OB Mounting the recommended overlap is 3" - 6"

Features

- Inside Mount only
- White Tiara (661) aluminum head and bottom rails. White vinyl side rails
- Use radio frequency controlled Bliss Automation or Somfy motors
- Wireless remote control operates individual or groups of shades

Operation & Installation Tips

- Skylight with Bliss and Somfy Automation have the option of an external battery pack that can be installed on the back of the headrail. Consider adding 48" Extension Cable (Part #62207000) to the order for installation flexibility. The part may be daisy-chained for additional flexibility.
- Shades installed into windows with metal casings may have a reduced radio frequency range, or may not operate at all.
- Do not let the antenna on the motor touch any metal objects. This may interfere with signals from the remote control.
- Make sure to leave the top of the headrail open (motor exposed), do not cover; especially with metal materials. This could result in a reduced radio frequency range for the remote control or the shade may not operate at all.
- Motorized Skylights will NOT operate properly if installed in a completely horizontal application. The minimum recommended slope is 5%.

MOUNTING REQUIREMENTS

- Should not be more than 1/2" out of square to perform as intended
- The widest width of the window cannot exceed the narrowest width of the window by more than 3/8"
- The shade must be mounted with the fabric stack at the top or highest point in the window.
